Portfolio of experiments, Resources - Guidance

About this tool

- This is a tool to help you capture ideas or actions that emerge as you are working through your systems change project or piece of work.
- You should think of it as a live document that can grow over time and include id from a range of people, not just the immediate team. It should help you think al the size, scale and length of an experiment or idea as well as the degree of collaboration that you need to make it happen.
- It will include a range of ideas and experiments, some bigger and more complex and some simpler that can be taken forward quickly.

How to use this tool

Step 1

Capture stand alone projects, programmes or innovations related to your **resources** -then consider if the collaboration required is individual (e.g within Start Network) or cross-sector

Step 2

Move on to medium term experiments or interventions related to you resources that might require more testing and adapting to see the impact on the system, and again map these according to level of collaboration required

START NETW RK

	Portfolio of experiments - Resources				START NETWO
		t		Range of collaboration	
ing		Long term systemic change (5-20 years)	e.g XXX		e.g XXX
deas bout					
DOUL	Scale of impact	Medium term experiments or interventions (2-5 years)	e.g XXX		e.g XXX
ex,	Sc		e.g XXX	e.g XXX	
		Stand alone projects, programmes or innovations (Quick fixes, 1-2 years)	e.g XXX	e.g XXX	
			Individual	Interdisciplinary group	Cross-sector group

Step 3

Lastly, capture long term system changes related to your **resources** that would likely only come to fruition in 5, 10 or 20 years time but would really shift the system.

Step 4

- Look at the spread of interventions and ideas you've captured. As a group discuss the portfolio of experiments you've mapped. What's missing?
- As you work through each of the stages capture the mix of ideas and experiments for each, perhaps by using different colour posits or on different print outs of the template.
- After completing all of them pull them together into one combined portfolio of experiments to prioritise which to start with across the full portfolio.

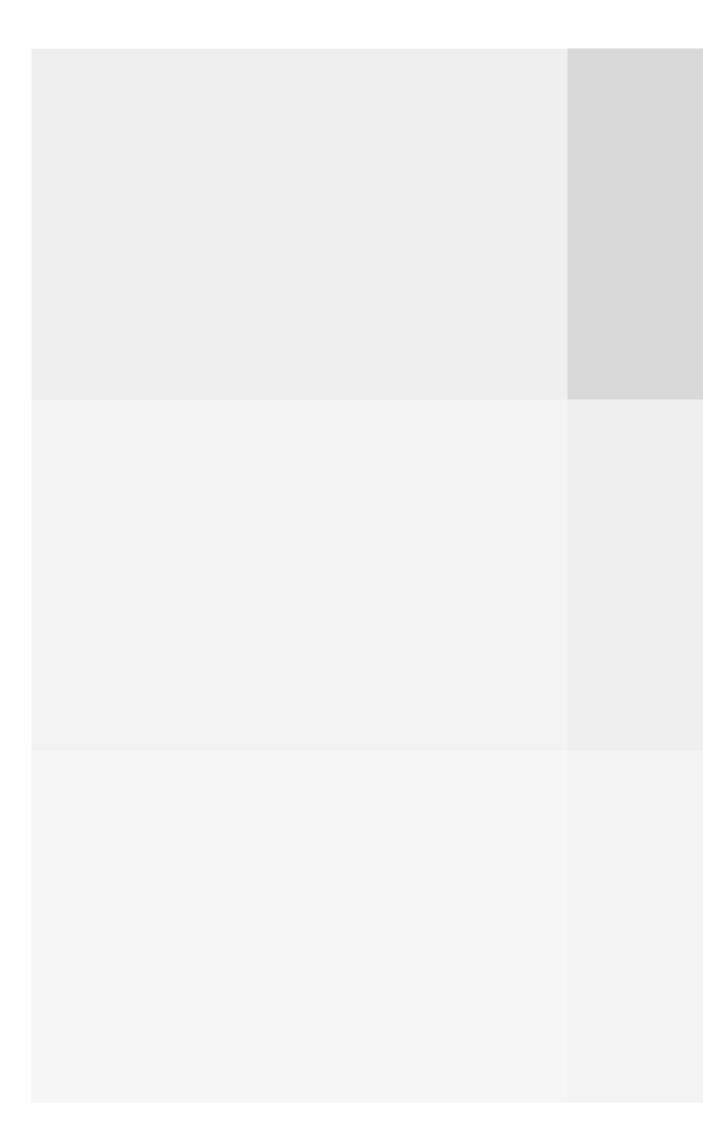

Portfolio of experiments - Resources

Long term systemic change (5-20 years)

Scale of impact

Medium term experiments or interventions (2-5 years)

Stand alone projects, programmes or innovations (Quick fixes, 1-2 years)
