

# Mapping your starting point - Guidance

## About this tool

‘Mapping your starting point’ is a simple set of questions that you can work through as a group to help start your systems change work or project. It is there to help make sure that everyone in the team/ group has a shared understanding of the problems you’re trying to address and what you’re hoping to achieve from the work.

We suggest working through these questions as group or team in a workshop setting and you leave with a clear ‘starting question’ that you’re looking to answer.

## Mapping your starting point - Template

**What is the current issue or challenge within the humanitarian system (or part of the humanitarian system) we want to address?**  
Describe it in a few sentences...

**Begin to frame the current issue or challenge as a question that you want to understand more about.**  
During this piece of work the question we are looking to answer is...

**As a group or team how do we contribute to these challenges or issues? What is our role in supporting to address them? What knowledge, skills do we bring to the table?**

**What do we know about the current issue or challenge? What knowledge, evidence, insight or data do we have about the challenge? Bring together your existing knowledge into one shared place.**

**How does the challenge or issue currently show up? How does it impact communities or people currently experiencing (or at risk of) crisis or conflict? Give some examples to help bring this to life.**

**What assumptions do we hold about the challenge or issue that need to be tested or validated? List them out and prioritise them based on your riskiest or biggest assumptions.**

**What early ideas do we have that might form part of a new, more locally-led and proactive system? How might we test out and validate/ invalidate our assumptions?**

**TIP:** If you haven't already, you may want to consider doing some systems mapping work to help you visualise the system or challenge in more detail.

**TIP:** If you can use our portfolio of ideas template to help capture some of these ideas.

## How to use this tool

### Step 1

- Based on the early question or problem you are looking to address, bring together a cross-discipline, cross-team group of people into a workshop.
- Consider whose voices might be missing and find ways to meaningfully include these people or groups in your work. Map your starting point, making sure to have a diverse range of experiences, knowledge and wisdom in the group.

### Step 2

- Allow the group a couple of hours to work through the questions included on this template.
- You may want to consider bringing in other tools or frameworks to help you answer some of the questions. For example using a systems mapping approach to better understand your problem or challenge.

### Step 3

- Once you’ve worked through all of the questions, try to end on a single question that you are trying to answer or explore further. You will use this to revisit throughout your work.

### Step 4

- Capture any actions or gaps that come from your discussions.
- Where you have gaps in knowledge, insight or wisdom, think about how you will address them, and what your plan for the work will look like.

# Mapping your starting point - Template

**What is the current issue or challenge within the humanitarian system (or part of the humanitarian system) we want to address?**

*Describe it in a few sentences...*

**Begin to frame the current issue or challenge as a question that you want to understand more about.**
